Hard of Hearing?

Would you take a chance on a store clerk fitting your new eyeglasses?

Hearing aids must be fitted, too, though many manufacturers cheapen their instruments by leaving out fitting controls, attempting to justify it with the claim that fittings are unnecessary. Government agencies and medical clinics, however, insist on the practice of fitting hearing aids as a regular part of their service to the hard of hearing.

Sonotone Hearing Aid Consultants are trained in measurement and fitting techniques. As with glasses, your instrument is tailored to your particular needs. This removes guesswork and is your assurance of the best in better hearing — *the first time.*
