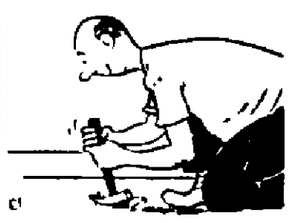
MISCELLANEOUS



One of the best ways to avoid having troubles with doors — especially outside doors — is to install a third hinge. Center it between the top and bottom hinge and it will help prevent the door from sticking and from warping.

After you have painted a window be very careful if you have to scrape paint off the glass not to damage the paint film over the putty with the razor blade. If this paint film is broken, moisture will get into cracks and start the putty cracking.

Galvanized iron is ordinary steel with a thin coating of zinc which prevents the steel from rusting. Unfortunately, this zinc coating is very thin and is easily scratched which allows rust to go to work. The best remedy is to keep all galvanized iron about the house well coated with paint.

When you put up a ladder, be sure that the legs of the ladder are one quarter the height of the ladder from the base of the wall on which the ladder rests.

If a nut on a bolt is so badly rusted that it can't be removed you can get it off by cutting through the end of the bolt and the nut with a hacksaw. Of course this ruins the bolt but it gets rid of the nut.

When you have to pull out a nail put a piece of scrap lumber between the head of the hammer and the wood into which the nail has been driven. This will make it easier to pull the nail and prevent the hammer head denting the wood under the scrap lumber.
