BED WETTING STOPPED

A NEW METHOD DISCOVERED FOR SOLVING THIS DISTRESSING PROBLEM
Until a child is two or three years old bed wetting is a normal practice. Beyond this age this habit is called by the medical term, Enuresis, and becomes a vexing problem that many parents find great difficulty in solving. Drugs are of no avail in the average case and punishment or scolding often makes the condition worse. Many forms of treatment have been tried in the past with little or no success. Now a new approved method has been devised that is generally successful in ridding the child of this humiliating habit in three or four weeks. This new treatment is really a conditioning of the child whereby he usually stops the bed-wetting habit all by himself. A dry child is a happy child. It was developed by a doctor and is endorsed and approved by physicians. No drugs or attachments are used. Full details of this new scientific discovery may be obtained by telephoning Miss Green at BR. 2821, or you may drop a post card to The Enurone Co., 227 D S. Robertson Blvd., Beverly Hills, Calif.—[Adv.
