

# To Discuss Communism Issue On 'America's Town Meeting'

Whether or not Communism poses a real threat to America will be debated by four prominent speakers, on "America's Town Meeting," in its broadcast at 7:30 p. m. Thursday over station WJZ. "Is Communism a Threat to the American Way of Life?" is the question, which finds Henry J. Taylor, foreign correspondent and author of "Men in Motion," and William Henry Chamberlin, foreign correspondent and author of "Collectivism—A False Utopia," defending the affirmative, opposed by Dr. Harry D. Gideonse, president of Brooklyn college, and another equally well-known speaker, George V. Denny, Jr., founder of "America's Town Meeting," is moderator.

With the stars of the film playing the roles they created on the screen, "Suspense" presents a radio version of the picture, "The Brighton Strangler," in its broadcast at 7 p. m. Thursday over station WABC. June Duprez, John Loder and Michael St. Angel are cast in the leading parts of this story of an actor who confuses his

# CARS TO USE WAR-TESTED MATERIALS

DETROIT, Dec. 22 — (UP) — Wide use of war-developed materials and improvements ready when war broke out are predicted by D. R. Bathrick, general sales manager for General Motors Corp. Pontiac motor division, when the industry starts making automobiles again. One post-war improvement will

be use of indium, now used by aircraft manufacturers on engine bearings to prevent corrosion, Bathrick said. "The use of indium for bearings was patented by Clarence F. Smart, Pontiac motor metallurgist, before the war. Before Smart's discovery, indium was used in the jewelry and dental trades to prevent tarnish. "Plastics have been developed both before and during the war," Bathrick said. "New plastics likely to be offered after the war may find a place in automobile construction, but not in bodies. Chief uses at the moment appear to be in ornamentation, steering wheels and fittings." Synthetic rubber, he said, has been found to be equal or superior to natural rubber for many purposes except tire, and is expected to be used widely for grommets, bumpers, battery cases, seals, bellows, gaskets and shims. "Use of phosphorescent paint for instrument panels also interests our engineers. This is a development used widely in aircraft in-

dustry to avoid glare and eye-strain." Production techniques developed or made common thru war work also will have wide application. Bathrick said, including high-frequency induction heating for heat treating, electronic controls for welding and heat treating, and centrifugal precision casting of steel for small parts which require high strength or heat treatment.

## STRIKERS TOLD TO RESUME JOBS

CLEVELAND Dec 21—(UP) — The Regional War Labor Board today ordered approximately 1,500 striking members of the United Automobile Workers Union (CIO) to return to their jobs at the Toledo plant of the Packard Motor Car Co. The strikers have been idle since Monday following the walkout last Saturday night of 250 co-workers, reportedly in protest of several grievances, including the alleged deduction of pay for washing on company time. The case is being mediated by the conciliation service of the U. S. Labor department.
