

Fix It Yourself

(The Handy Man)
By HUBBARD COBB

ODDS AND ENDS

To be perfectly frank, we can think of a lot of other things we'd rather be doing today than writing this article. On the other hand there are probably even more things you'd rather be doing than reading it. So now that we're both unhappy, let's get down to business.

The best way to tell the difference between hardware that is solid brass and iron or steel that is just brass plated is with a magnet. If the magnet sticks then the article is not solid brass.

Leather upholstery often gets sticky due to dirt and improper dressing. Give it a washing with mild soap or saddle soap, using as little water as possible and then apply a leather dressing recommended for furniture.

Scratches in a varnished floor can often be sanded out so they will not show. Use a fine grade handpaper for this work. Something around 6-0.

Never set a paint brush in a container so that the ends of the bristles come into contact with the bottom of the can. Best way to avoid this is to drill a hole through the handle so that it can be hung by a piece of wire.

A lot of squeaking doors can be cured by getting a few drops of oil in the right place. The right place is the pin holding the two portions of the hinge together. These pins can usually be pulled in and then given a few drops of oil.

TODAY'S RADIO PROGRAM

Note: (*) Indicates program is heard on WJZ and WELI.
