On the Air Waves Crippled Inventor Strikes It Rich With TV Aerial

By LAWRENCE N. ELDRED

CHICAGO, (AP). Television's thriving business is bolstered by individual success stories such as this one about Ralph Leonard.

Although racked by arthritis, at 38, he has built a million-dollar business in the last two years with development of a telescopic indoor TV antenna.

In 1948 roof antenna installations were indispensable at an added cost of \$65 to \$70 each. Many potential set buyers felt they couldn't pay this on top of the original cost of the set.

Leonard saw the need for a satisfactory indoor antenna at a low price and set to work on his kitchen table with ordinary hand tools. He had no previous experience in radio or electronics.

By May, 1948, he had a test model, and took it to a convention of radio-TV technicians in a Chicago hotel. From there an action was swift.

"They encouraged me to go into production," Leonard recalled. "In September of that year the first units were rolling out of our storeroom machine shop.

PRODUCTION LEAPS "A backlog of orders forced us to refinance and expand. We built 750,000 units last year. Now we have stepped production up to 25,000 a week.

Leonard has had arthritis for 15 years. When ACTH first was tried as a treatment for the disease, he was "guinea pig No. 4" at a Chicago hospital and reports improvement was astounding.

He has already noted that when the pack is frozen in the early stages of a hand it is advantageous to hold many cards and disadvantageous to hold only a few cards.

For example, suppose you hold 11 cards while an opponent holds only eight cards. You have an advantage, but it is not a big one.

As a player with eight cards, therefore, you have a fair chance to get the pack. He also has a reasonable good chance to pick a safe discard and isn't much worse off in this respect than the player with 11 cards.

Now suppose that your partner holds only three cards. His disadvantage is a very great one. Your advantage of 11 cards to eight cards is not so great as that.

The question of position may also be important. For example, suppose you have your full hand of 11 cards and that one opponent has only five cards. Your partner has only three cards, and one

opponent likewise has only five cards. Who has the advantage, particularly when the pack is frozen?

You have the advantage if your partner is discarding to the other short hand. The opponent has the advantage if you are discarding to the short opponent.

Suppose your partner is discarding to the opponent with five cards. He is not likely to give the pack away. The short opponent can hold two pairs at best, and may not have even one pair.

Even though your partner will have his troubles with only five cards in his own hand, he has a very good chance to stay out of real danger.

Meanwhile, the opponent with only five cards is discarding to your 11-card hand. He will have his troubles, just like your partner, but he is not as likely to land on his feet. You may have four or five pairs behind him, and when he makes a risky discard you will probably be able to snap your hand to 11.

Dummy's Ace Is Trap Bait to Lure Desired Discards

By OSWALD JACOBY

"I'm getting so forgetful," hand. He could never get back to sometimes I can't even remember my own name.

West naturally won the second trump finesse with the king, and returned the 10 of clubs. Lou ruffed the third round of trumps, and led three rounds of trumps.

As usual, the cause of this outbreak was a bridge hand. Lou had managed to swindle both opponents at once by the same play.

West opened the queen of clubs, and dummy won with the king. Lou naturally led a trump from the dummy, finessing the nine from his own hand.

As it happened, however, West was able to win the second trick with the jack of trumps. He ruffed the jack of clubs, and dummy won with the ace.

At this point Lou executed his little swindle. He merely led dummy's remaining trump and finessed the queen from his own

probably give the pack away before long.

Q.—The turn-up card is a queen. I must make the first play, and there is a red three in my hand. I need only 30 points for the first meld, assuming that the correct procedure, assuming that I want to replace my red three and meld the five queens?

A.—First put down your red three. Next draw a card from the stock to replace the red three. (If the replacement is a red three, draw again. But be sure to have only 11 cards in your hand when you have finished replacing your red three.) Then put down your four queens on the table and add finally discard any of the remaining seven cards in your hand. You are left with six cards, and it is then his play.

Q.—South deals. Does West have the right to put the first turn-up card in his hand? For example, suppose the first card turned up is a queen. West has only one queen in his hand and cannot meld. Can he pick up that queen anyway?

A.—No; he cannot pick it up. Whenever you pick up a card is considered a discard, you must meld it then and there. If you can't meld it, you can't pick it up.

Mr. Jacoby is unable to answer individual questions on canasta from readers. However, he will include the most frequently asked questions in his column.

Public Works Parleys Set by State Group

SACRAMENTO, June 27. (AP) A series of meetings of the State Assembly interim committee on conservation, planning and public works starting in San Diego July 10 and ending at Fresno July 18 has been announced by Charles M. Weber (R-Stockton), committee chairman.

Granted Probation in Theft of Amplifiers

Harley E. Watkins, 20, electrician, who pleaded guilty three weeks ago to the grand theft of two amplifiers valued at \$500 from a radio supply store at 959 American Ave., May 3, won probation from Superior Judge Judge Miller, in placing Watkins on three years probation, said he agreed with Watkins' attorney, Edison Demler, that Watkins, who has a previous record, would serve economic strain.

'Freeze' Help Is Relative

By OSWALD JACOBY

Written for N. Z. A. Service

When the pack is frozen in the early stages of a hand it is advantageous to hold many cards and disadvantageous to hold only a few cards.

For example, suppose you hold 11 cards while an opponent holds only eight cards. You have an advantage, but it is not a big one.

As a player with eight cards, therefore, you have a fair chance to get the pack. He also has a reasonable good chance to pick a safe discard and isn't much worse off in this respect than the player with 11 cards.

Now suppose that your partner holds only three cards. His disadvantage is a very great one. Your advantage of 11 cards to eight cards is not so great as that.

The question of position may also be important. For example, suppose you have your full hand of 11 cards and that one opponent has only five cards. Your partner has only three cards, and one

opponent likewise has only five cards. Who has the advantage, particularly when the pack is frozen?

You have the advantage if your partner is discarding to the other short hand. The opponent has the advantage if you are discarding to the short opponent.

Suppose your partner is discarding to the opponent with five cards. He is not likely to give the pack away. The short opponent can hold two pairs at best, and may not have even one pair.

Even though your partner will have his troubles with only five cards in his own hand, he has a very good chance to stay out of real danger.

Meanwhile, the opponent with only five cards is discarding to your 11-card hand. He will have his troubles, just like your partner, but he is not as likely to land on his feet. You may have four or five pairs behind him, and when he makes a risky discard you will probably be able to snap your hand to 11.

Now suppose that your partner holds only three cards. His disadvantage is a very great one. Your advantage of 11 cards to eight cards is not so great as that.

The question of position may also be important. For example, suppose you have your full hand of 11 cards and that one opponent has only five cards. Your partner has only three cards, and one

opponent likewise has only five cards. Who has the advantage, particularly when the pack is frozen?
