Reminders of Art Interest

By WILLIAM L. DOUDNA (State Journal Music Editor)

Such programs as the Madison Rotary club had Wednesday and announcements of approaching rural art shows in the state are pleasant reminders of the Wisconsin's continuing interest in and development of the arts.

Sometimes I think we could well afford to have a statewide arts commission, such as Louisiana's, to correlate and further develop cultural activities. And then I decide that we don't really need it (except perhaps for publicity purposes), since many privately and publicly supported organizations are doing such good jobs in communities and the state as a whole.

For example, there are the rural art shows sponsored by the University of Wisconsin; the dramatic and creative writing works of the Wisconsin Idea Theater; the Wisconsin School Music Association; and so on.

Madison Rotarians last week heard four young musicians, all of whom have developed their talents in the city. As Walter Heermann remarked in introducing the girls, they represent a cross-section of Madison's youth in musical activity, for all have studied music both in regular school hours and with private teachers.

And all of them—Josephine Raimond, Lorraine Emordeno, Lucille Kubiak, and Ardith Mossman—showed a high degree of talent. Predictions about the future of musicians are always perilous, for it depends as much upon their ambition and their capacity and willingness for hard work as upon their native talent.

This club, and others which have similar programs, deserve a salute for giving the youngsters a chance to perform and their members a chance to learn for themselves about what is going on in the field of music.

As for rural art shows in the Madison area have been announced. Twelve regional exhibitions will be held throughout the state this winter and spring, and works chosen from them will be displayed in the 13th annual Rural Art show on the university campus May 24 to June 24, followed by a junior show June 30 to July 15.

Dane county artists will take part in the Portage show in March. Sauk, Columbia, Dodge, Adams, and Green Lake counties also will be represented there. A one-day art school will be held in connection with the show Mar. 29.

Another area show will be held Feb. 2 to 9 in the Methodist church at Black River Falls. Entries must reach the county extension office in the court house there by Feb. 1. An art school on Feb. 9 will close the show.

The sixth annual Hill and Valley regional show will be held at Prairie du Chien from Jan. 29 to Feb. 2. Artists from Richland, Vernon, and Crawford counties will take part. It will be in the agricultural shop of the high school, where a Artur Vierthaler of the university will conduct a gallery tour and school on Feb. 2. Entries are due Jan. 26 at the Crawford county extension office.

Lafayette, Iowa, and Grant county artists will exhibit their works Feb. 23 through Mar. 1 at Dodgeville. James Schwalbach of the university will conduct a one-day art school in connection with the exhibition.

Television Used to Aid Scientific Observation

CLEVELAND, O. (U.P.)—Although normally a medium for entertainment, television is being used here for scientific observation where first hand observation would be fatal or injurious.

Electrical engineer Frank Friswold at the government Flight Laboratory adjoining Municipal Airport showed the experimental center's innovation recently when observations were made of a rocket engine's operations via video.

Friswold explained that the lab's TV set is used to study wind tunnel tests, the flame emitting from a ram jet engine, and similar operations that would be dangerous for first hand observations.

Uncle Ray's Corner

Lake Dwellers Raised Grain

A week ago I spoke about the discovery of the remains of scores of Swiss lake villages. Study of the tools left by people of the villages showed that many of them lived in what is known as the Late Stone Age.

Some of the stone tools were the blades of axes or hatchets. It was plain that they had been used with wooden handles.

Along with stone tools, there were some tools made of copper, others of bronze. The metal tools dug up from the lake bottoms indicate that the villages existed during a long period, passing from the Late Stone Age into the early part of the Age of Metals. No one can tell exactly how long ago the villages existed, but it is safe to say that the remains date back several thousand years.

There is good proof that the Lake Dwellers raised grain. Large amounts of scorched grain have been found in the mud. A single village provided 100 bushels of such grain.

We can imagine some of the residents of a village having the special task of caring for live stock. In the morning, as we may suppose, they drove the live stock to the shore by way of broad piers, then headed the animals into pastures. During the day, shepherds would guard the herds or flocks against attacks of wild beasts.

Other Lake Dwellers doubtless had the task of planting crops, and of taking care of them as the growing season went on. From the grain found in the lake mud, we know that wheat and barley were raised. Scorched "bread-cakes" have been found; there were made from wheat or barley mixed with poppy seeds and flax seeds.

We also know that the Lake Dwellers used flax to make cloth. Circular pieces of clay, with a hole in the middle of each one, have been dug up. It seems plain that these were employed in spinning thread.

Another find was a small round stick, with flax thread wound about it. This may be the oldest "spool of thread" known to man. Cloth usually wastes away after being left in lake water. All the cloth of the Lake Dwellers would have been lost except for fires which broke out in the villages. Several small pieces of partly-burned cloth which fell into the water and sank to the bottom were saved until modern times.

The burning, or scorching, of the bits of cloth kept it for us to see thousands of years later. Nowadays people are likely to make fairly long trips when they go fishing. What a different story it was with the Swiss Lake Dwellers! They could drop lines from the platforms on which their little homes stood.
