Powerfu Gasoline

Today's more powerful engines require a highly complex gasoline to deliver their full power. There can be as many as 1500 different chemical compounds in a gallon of gasoline.

To select the best of these chemicals, and to arrange them properly to fulfill the needs of your car calls for the last word in refinery equipment and scientific skill.

It is Shell's manufacturing policy to make "The most powerful gasoline your car can use." Shell activates gasoline by splitting and rearranging petroleum molecules.

The result-Shell Premium-the most powerful gasoline your car can use. See the Shell Dealer in your neighborhood.
